

The Solar Connections International PV Cube Series provides the most versatile standing seam roof clamp system on the market, with the capability of fitting nearly all standing seam roof panel profiles, with five simple SKUs, as well as the option to provide one, two, or three stainless steel Silver Bullet™ set screw attachment options. The ability to nearly cover the entire standing seam roof panel industry with a very limited product line has proven extremely beneficial to inventory reduction, and installation processes and procedures across the industry. The PV Cube product line is known as the strongest and most robust clamps on the market, providing the ultimate in strength and capability which is consistent within all of the Solar Connections International product lines that we provide. With the use of our patented stainless steel Silver Bullet™ set screw design you can rest assured that this installation will not penetrate or pierce your roof panel system, nor mar your panel finish. The Solar Connections International PV Cube product line provides the ultimate in protection of your roofing system application, while installing your solar system installations, avoiding damages to your panel seams which can be recognized with other manufacturer's attachment systems on the market.

 **Proudly Made In The USA!**
