

DIRECT TO DECK MOUNT FOR ASPHALT SHINGLE ROOF SYSTEMS

The Solar Connections International Fusion Mount direct to deck mount is your solution for all of your solar attachment needs, within your asphalt shingle roof system applications. Our cutting edge design provides for a robust and secure single piece installation, that incorporates preset location points for easy fastener installation through its hollow fastener core, supporting labor cost savings through its streamlined installation procedure.

Additionally, and through the use of our pre-applied butyl tape, you can rest assured that you will receive a durable and reliable premium water proof seal from edge to edge, with the custom butyl installation conforming to the minor irregularities consistent within a shingle roof system, further assuring the highest quality installation that you can receive, and that you have come to expect from the entire Solar Connections International product line.

With the ability to receive the Fusion Mount in either standard Mill Finish Aluminum or in a powder coated finish in nearly any color, upon request. Our state of the art design will further add that aesthetically pleasing touch to your solar panel system installation investment.

KEY FEATURES

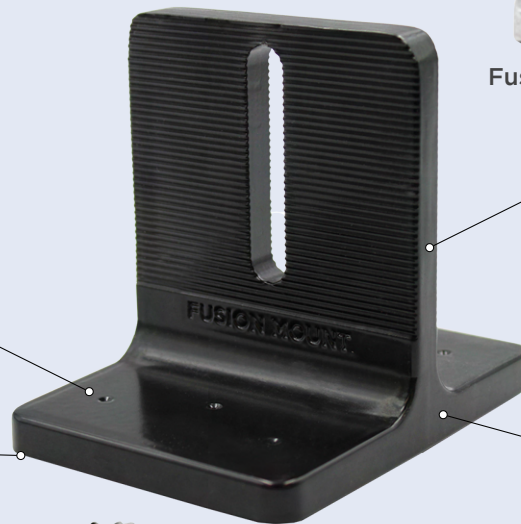

- Robust design with incredible strength and versatility.
- Made from Premium 300 Series aluminum.
- Designed with no requirement to lift or adjust the shingles during installation.
- Competitively priced with streamlined aesthetic appeal.
- Pre-applied butyl tape for premium waterproof seal.
- Requires only one SKU, limiting the need to inventory multiple products for the same installation.
- One single piece design simplifies installation, and considerably reduces your labor and installation costs.
